Here are the movies, music and books from this week's Windows Central team. The weekend is just around the corner!. What better way to relax than with some great music, a quality movie, or a real page turner? If you're looking for suggestions, we've put together a collection of some of the best things out there right now. (And we have really good taste... or at least we like to think like this.) Here are some of the movies and TV shows Windows Central is enjoying this week. Lost Recommended by Cale Hunt, staff writer It started in 2004 and wrapped in 2010, but people still talk about the TV phenomenon that's been lost. I never watched Lost when it aired, nor did I really pay attention to the plot, other than that it was very confusing. I know how it ends. That hasn't stopped me from tackling it from the beginning. My part of Canada is cold and rainy, and a long TV series is quite appealing. From the beginning, Lost sucks you up with a giant, invisible threat stalking the jungle, a transceiver picking up a distress signal that's been running for 16 years, and a convict at large. I'm still very close to the beginning, but I can already see why Lost was so popular. Pack all six seasons in a bundle and binge away! See at Microsoft Store Music Here's some of the music the Windows Central team is listening to this week. Near the Wild Heart of Life - Japandroids Recommended by Dan Thorp-Lancaster, staff writer I've been a fan of Japandroids' signature wall-of-guitar-and-drums sound since I was introduced to the band with his latest album, Celebration Rock. The latest album, January's Near to the Wild Heart of Life, largely sticks to the same youthful, anthemic tone, amplified by Celebration Rock, but with a more polished feel. As excellent as Near to the Wild Heart of Life is, it feels like it lacks the punkish angst that gave the band its near-hopeful sound and edge on previous albums. Still, Japandroids has a talent for songwriting, and this latest effort doesn't disappoint on that front. See on Microsoft Store Coming To You Live - DPR LIVE Recommended by Matt Brown, writer DPR LIVE recently announced a concert in London, and since then I have been listening to his first full album Coming To You Live. The rapper and singer is best known for the creative aesthetic of his music videos over the years and the title track of his latest release, 'Know Me', builds on this legacy. As part of the Dream Perfect Regime crew, DPR LIVE delivered five unique music videos alongside the seven-part album. While for the full experience I recommend checking these pieces, with a strong of collaborations, the album also stands strong on its own. See on Microsoft Store Wonderful Wonderful – The Killers Recommended by Al Sacco, managing editor Until last week, The Killers had not released a 'real' new album in Year. (That crappy Christmas album and greatest hits compilation don't count.) And the new album, called Wonderful Wonderful came close to never happening - apparently in-fighting within the band is why it's been so long since they released an album, and its members reportedly almost broke up. I'm really glad they didn't. Because Wonderful Wonderful is a good listener. The singles have been available for a few weeks, including the unmistakable earwigs 'The Man' and 'Run for Cover'. And although I'm not a big fan of the random remixes of the former track that make up the album, the title track is also playing on loop in my head this week. Seriously, I can't stop mentally singing great, great over and over again. The Killers have always been great at creating ballads with choruses that grab you and don't let go. Wonderful, Wonderful is full of tracks that fit that bill. Give it a listen. I bet you'll catch an earworm soon enough. See at Microsoft Store Trouble - R3hab Recommended by Rich Edmonds, staff reviewer R3hab is not new to the EDM scene, but in his debut album, Trouble, it's easy to get lost in great vibes, flowing melodies and excellent collaborations. Names such as Vérité, Quintino, Rynn and Kherebto are also discussed. See at Microsoft Store Hallelujah Anyhow - Hiss Golden Messenger Recommended by Cale Hunt, staff writer from North Carolina, Hiss Golden Messenger is a band that has been around since 2007. Fronted by lifelong musician MC Taylor, the band has recorded many other musicians, both in the studio and on tour. The mix of folk rock is sometimes heavy, sometimes light, but we always hear Taylor's voice shine through. That's not to put the musicians in the background; Each album is a layered project that you listen to repeatedly and still hear new little riffs that you didn't hear last time. The latest album, titled Hallelujah Anyhow, is on the lighter side (but, I mean, it's folk rock), and is one of those albums you don't mind listening to from start to finish. If you love soaring harp solos, you should listen to the sixth track, 'Gulfport You've Been on My Mind.' See at Microsoft Store Books Here are the books we're reading this week! The Names of the Dead Girls - Eric Rickstad Featured by Al Sacco, managing editor I'm a big fan of dark, twisty-turny thrillers, and Eric Rickstad's latest novel, The Names of the Dead Girls, is just that. Rickstad's novels are set in rural Vermont, in an area along the Canadian border called the Northeastern Kingdom. And the beautiful, desolate environment - along with the unpredictable weather - plays an important role in creating the ominous mood in Dead Girls, as well as in the first book in the ongoing series, called Silent Girls. The novels follow former agent Private investigator Frank Rath as he recovers for a heinous crime he personally experienced while trying to prevent and catch other similar injustices who are still at large for related unsolved crimes. Dead Girls is well paced, expertly plotted and beautifully written, and Rickstad's examination of extreme violence in institutions that are otherwise seemingly serene creates a memorable and unique take on the detective genre, which often feels repetitive and musty these days. You want to start the series fresh with the first novel. But you won't be able to put it down, I promise, and when you're done, you'll have no choice but to pick up the sequel, The Names of the Dead Girls. (Full disclosure: I'm friends with the author's wife, but I've never met the man, and I wouldn't recommend the book if I didn't thoroughly enjoy it.) Wizards of the Gods - Graham Hancock Recommended by Cale Hunt, staff writer Wizards of the Gods is the sequel to Graham Hancock's 1995 Fingerprints of the Gods, which set out what Hancock sees as evidence of a prehistoric intelligent civilization that was wiped out by a catastrophic event. Much more evidence has emerged since Fingerprints of the Gods was published, which Hancock has included in this new book. Places like Gobekli Tepe, Baalbek, Giza and Sumer are seen by Hancock as evidence of this forgotten civilization that can pass on some knowledge after a comet strike that ended the last ice age. Whether Hancock's hypotheses are true, they are certainly interesting to read. If you enjoy fringe history, give either book a go. Your favorites? What have you been watching, reading and listening to this week? We want to know, so drop a comment and share your recommendations. If none of these recommendations strike your fancy, check out a list of all our past recommendations. We promise you'll find something you'll like. Movies & Music media recommendations AT&T (T) - Get Report has jumped on next year's radio golf auction with a \$2.5 billion bid for Aloha Partners' 700-megahertz spectrum licenses. In the deal, AT&T would become the owner of the former UHF channels 54 and 59, the so-called C-block of the wireless spectrum that Aloha had acquired in recent years. Aloha owned the largest strip of licenses representing about 80% of the population in the top 100 cities. The move comes on the eve of the Federal Communications Commission's 700MHz license auction scheduled for January 24. Analog UHF TV channels have been ordered to leave the radio waves to make the frequencies available for wireless services. By federal agency estimates, the 60 MHz of spectrum in the 700 MHz auction could fetch anywhere between \$10 billion and \$15 billion for the U.S. Treasury. Industry observers call the 700MHz spectrum prime radio wave given the ability of signals in this range to flood wide zones and travel through walls. These features open up the possibilities for broadband data and mobile TV services. In addition to the usual suspects such as (VZ) - Get Report, the spectrum auction has caught the attention of big names outside telecom. In July, Google (GOOG) - Get Report offered to bid \$4.6 billion in the auction as the FCC put out the winners with a condition that the network be open to all devices. AT&T's deal with Aloha may have sidestepped that requirement. The deal would be a big jackpot for Aloha investors Amos Bud Hostetter, a cable industry billionaire, and Charlie Townsend, CEO of Aloha, the Providence, R.I., spectrum store. AT&T shares fell 3 cents to \$41.90 in premarket trading on Tuesday. Tuesday.
